

- In Canada and the USA, 12 million women every year seek consultation for vaginal infections
- In Canada, 600 000 women a year seek consultation for Bacterial Vaginosis

Inflammation of the vagina and vulva is most often caused by a bacterial, fungal or parasitic infection

Healthy vaginal flora consists of lactic acid bacteria that keep pathogens under control. Maintaining this normal equilibrium is key to preventing vaginal infections.

Probiostat® Vaginal
A broad selection of probiotics to protect and restore the vaginal flora.

- Probiostat® Vaginal aids in restoring the vaginal flora by introducing lactic acid bacteria directly into the vaginal environment.
- Probiostat® Vaginal contains *L. casei* which reduces the ability for pathogens to use arginine as food supply resulting in acidification of the flora.
- Probiostat® Vaginal has a formula that contains a blend of probiotics to provide a wide range of benefits against bacterial vaginosis.

Probiostat Vaginal

Beneficial effect against pathogens

PROBIOSTAT [®] <i>Vaginal</i>	Acidification	Adhesion				Inhibitory effects		
	Lower pH	Proliferative index	Non-specific (including biofilm)	Specific	Co-aggregation	Hydrogen peroxide (H ₂ O ₂)	Inhibitory metabolites	Depletion of arginine
<i>L. bulgaricus</i>	▲	▲			●	▲	●	
<i>S. thermophilus</i>	■	■						
<i>L. rhamnosus</i>	●	■	■	■	▲	■	▲	
<i>L. acidophilus</i>	■	■	■	■	■	▲	■	
<i>L. casei</i>	■	■	●	▲	▲	■	■	■

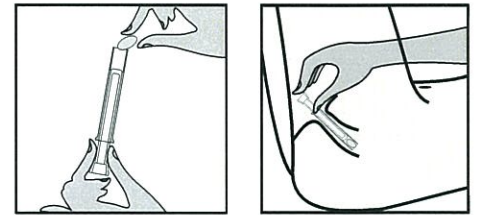

Legend	▲ Slight	● Moderate	■ Strong

Probiostat[®] Vaginal provides a broad spectrum of lactobacilli to regenerate vaginal flora.

Method of use

Indications:

- For prevention and treatment of specific and non-specific vaginal infections.
- For the restoration and the maintenance of healthy vaginal flora, the *L. Casei* strain contributes to eliminate the "fishy" odour from bacterial vaginosis.
- Probiostat[®] Vaginal treatment can be safely used before, after or concurrently with other gynaecological therapies.

Directions:

Bacterial vaginosis: 1 capsule intravaginal at bedtime for 10 consecutive days.

Caution:

Keep out of reach of children. This box contains capsules, applicator and cellophane which may present a choking hazard.

Warnings:

- Use by pregnant women should be recommended only after weighing the potential therapeutic benefit against the hazards involved.
- Should not be used if you have shown hypersensitivity to any of the ingredients.
- Should not replace treatment of clinically diagnosed *Candida albicans* infection. Could be used to restore the normal flora at the end of antifungal treatment.

Storage:

After opening keep refrigerated between 2 to 8°C. To maintain product quality do not remove desiccant pouch from bottle.
